InterMotive Launches Clutch Pump Controller

Colfax, CA (April 1, 2009) InterMotive has launched the sale of a Clutch Pump Controller (CPC) that prevents the Engine Shutdown System (ESS) from turning off the engine and allows for dual speed RPM control.

The CPC controls idle speed and provides a switch input to allow the user to select either 675 rpm (e.g. when operating a bucket) or 1280 rpm (e.g. when operating hydraulic tools). It also protects against over revving damage to the pump by disengaging the clutch when necessary and prevents the ESS from turning off the engine while equipment is in use. As an added safety feature CPC locks the transmission shifter in Park during pump operation.

InterMotive is an ISO 9001:2000 registered company based out of Colfax, California that designs and manufactures vehicle control systems for the work truck, transit, school bus, personal-use, and emergency response markets.
