### **InterMotive Launches Work Truck Shift Interlock**

**Colfax, CA** (September 19, 2008) InterMotive has launched the sale of a work truck shift interlock which is designed to engage the Ford and GM work truck and van shift lock when truck equipment is being used (e.g. outriggers deployed and a bucket is in operation). This safety action prevents the vehicle from moving when the equipment is not in a stowed position.

InterMotive, the industry leader in wheelchair lift interlocks, has applied their shift interlock technology to work trucks to help make their operation safer. To provide for safe equipment operation, NHTSA enacted a law requiring that the vehicle is locked down (in Park) while the lift is in operation in order to protect individuals and property while using the equipment.

InterMotive is an ISO 9001:2000 registered company based out of Colfax, California that designs and manufactures vehicle control systems for the transit, school bus, personal-use, and work truck markets. To learn more about InterMotive's products, call 800-969-6080 or visit their website at [www.intermotive.net](http://www.intermotive.net).
